

Forthcoming Activities

Workshop on Archives and Life-History Research
Faculty of Political Sciences and Sociology
Universidad Complutense de Madrid, Spain
21 - 23 September 2009

Spatial and Network Analysis in Qualitative Research
European University Cyprus, Nicosia, Cyprus
25 - 27 November 2009

Multi-media Methods
Berlin
January 2010

The Quality of Qualitative Research
Oslo
Spring 2010

International Perspectives on Qualitative Research in the Social Sciences
London
4 - 6 May 2010

Innovation in European Qualitative Research Methods
A Euroqual contribution to the Oxford Research Methods Festival
Wednesday 4 July 2010

Qualitative Social Science Research in Europe

A programme supported by
the European Science Foundation

About Euroqual

The main objective of Euroqual is to advance, develop and disseminate knowledge of the increasingly specialised methods of data collection, analysis and theory building in qualitative social science research.

The programme consists of a series of integrated workshops and seminars, providing training for junior social scientists in the latest methods of analysis, and also enabling senior researchers at the cutting edge of analysis and methodological innovation to share their research.

The underlying focus of the programme is on the interdisciplinary exploration of methods and the translation of methodological innovation into research practice.

Themes

The Euroqual programme focuses on a number of key themes of methodological significance within the social sciences. Thematic priorities include:

- The collection and analysis of visual data
- Life-histories, biographies and archives
- The integration of spatial and network analysis into ethnographic and qualitative research
- The collection and analysis of narrative and discourse data
- The use of innovative information technologies for creating, analysing, and disseminating data
- The use of qualitative data for developing and evaluating evidence-based social policy and practice
- The use of multi-method research designs and strategies

Euroqual Conference

International Perspectives on Qualitative Research in the Social Sciences

One Great George Street
London

4-6 May 2010

An international conference which will explore the collection and analysis of increasingly complex data and theory-building in qualitative social science research. Invited plenaries and semi-plenaries will review the major issues facing researchers, and the innovative methodologies which are being developed within this context. The conference will be structured around the main themes of the Euroqual programme.
